Project Development with UML and Enterprise Architect

Dietmar Steinpichler
Horst Kargl

Project Development with UML and Enterprise Architect

Training Documentation – 8.0th Revised Edition

© SparxSystems Software GmbH, Vienna

The Authors

Ing. Dietmar Steinpichler is a qualified engineer who operated his own real-time systems development company. His previous engagement was for a telecom as business analyst and designer. His key competencies are programming language development in CTI, pattern recognition and abstraction algorithms. As technical project leader, his team handled many major projects with UML modelling tools and distributed architecture.

Since 2007, Mr. Steinpichler acts across Europe as trainer and consultant for Sparxsystems Software GmbH with focus on quality assurance, project processes and requirements management.

Email: dietmar.steinpichler@sparxsystems.eu

Dr. Horst Kargl is engaged in object oriented modelling and programming since 1998. Before joining SparxSystems he was a teaching scientific assistant at the Technical University of Vienna, involved in several research projects with focus on e-learning, semantic web and model driven software development. His study for a Phd was concerned with automatic integration of modelling languages.

Already acting as a freelancer for SparxSystems during his study, he joined SparxSystems Europe in September 2008 as an employee, focused on software architecture, code generation and customization of Enterprise Architect.

About this Edition

As a tool, Enterprise Architect goes beyond the UML basic diagrams concentrated on in earlier handbook versions. Questions asked by product training participants have shown that, in practice, the user desires more coverage of the full lifecycle – embedding the tool into their project cycle – in addition to standard UML user instruction.

In any case, this handbook in its narrow scope can only serve as an introduction into UML and Enterprise Architect, complimented by several hints and recommendations on project procedures. This handbook should also not be considered as a replacement for the 1800-page online help supplied with the product. Further reading of available materials is also sensible and in many cases necessary. The practical examples included here should help in the extensive implementation of this solution, especially where applicable to process quality systems, and in the efficient and effective modelling of the entire product cycle.

The new features of Enterprise Architect Version 8.0 have been added to this edition.

Transformation of (Partial) Content in Database View 176
Set Label Visibility 180
Code Modelling 182
Set Feature Visibility 183
Diagram Options 184
Sequence Diagram (Code Planning) 189
The Fragment or Framebox Element 193
Code Generation 195
Behaviour and Initial Code 199
Generation of #include, using, import by Dependencies 199
Behaviour Code Generation from Activity, State and Sequence Diagrams 201
Forward and Reverse Engineering 201
Changes on Operation Names and Parameters 203
Define Own Data Types 203
First-Time Reverse Engineering of Existing Programs 203
Build and Run 205
Configuration Scripts for Build and Run 205
Build Settings 206
Test Settings 207
Unit Testing 207
Debugging 207
Manual Recording 208

Automatic Recording ... 208
Important System Requirements ... 208
Entity Relationship (ER) Diagram - manual creation ... 209
Create Tables and Columns ... 209
Create Foreign Key Relationship ... 210
Entity Relationship (ER) Diagram Reverse ... 211
Component Diagram ... 214
Deployment Diagram ... 215
Define Attributes for Nodes ... 215
Extended Functionality of Enterprise Architect ... 217
Copying Diagrams ... 217
Use of Patterns ... 218
Incorporation of Change Requests ... 219
Transparent Incorporation of Changes ... 220
Setup of Search and "Model Views" ... 221
Use of Stereotypes ... 225
Use of Metafiles (Clipart) for Stereotypes ... 227
Use of Shape Scripts for Stereotypes ... 228
Creation and Use of Profiles ... 229
Creation of Documentation ... 232
HTML Documentation ... 232
RTF Documentation ... 234
Team Collaboration – Multiple Users of a Model ... 241
Use of a DB Server for Project Stability ... 241
EA Security – Integrated Authorisation System ... 242
Replica Feature ... 248
Baseline – Internal Versioning Management ... 249
XMI Import and Export ... 254
CSV Import und Export ... 256
Version Management external ... 259
Set Up Version Control for Package ... 262
Use of Local Paths ... 265
Cost/Effort Evaluation ... 266
System View ... 268
Discussion Forum - Team Review ... 271
Audit View – Protocolling ... 272
"Implementation Details" Special Report ... 274
"Dependency Details" Special Report ... 275
Model Validation ... 275
Presentation Mode ... 276
